

MANUAL SWING GATE MT310-M

This manual swing gate is a simple and low-cost swing gate, mainly used to control two-way traffic (single way is available also). It has a built-in high-performance floor spring to control the running direction. The manual push arm opens below 90 degrees and the floor spring automatically closes the gate. When the manual push arm is opened to 90 degrees, the swing arm will lock and you need to manually push the arm to close the gate. This swing arm is a customized one. The special cutout is for kid pass through. There is an option with a lock on the gate that can be used to block the way.

Technical Specifications

Gate Size	φ168*1000mm (can be customzied)
Gate Material	304 Stainless steel
Swing arm Material	Acrylic&Tube
